Abstract

The University of Gezira, Sudan appreciates the role of the President of Brazil for establish the ?Global Multistakeholder Meeting on the Future of Internet Governance", and I am happy to proposed this proposal on behalf of University of Gezira, so that the University of Gezira, Sudan that can participate in this meeting. We look forward to participating in meaningful discussions that generate support for the evolving multistakeholder framework for the future of Internet governance in management transparency and freedom of the Internet to achieve the objectives of citizens to live happily and well-being and equal in rights and duties in the world.

Document

The University of Gezira submits the following contribution a roadmap Topics: Cybercrime, children, the youth and Special Needs .

Over time, increases cybercrime and multiplied its forms not only to break into networks and steal information or sabotage them only, but also appeared moral crimes such as kidnapping, extortion , murder and others.

In light of the tremendous advances of information technology , and because of the sheer number of individuals and institutions who attend this network , it has become easy to commit the most heinous crimes against their visitors, whether they are individuals or institutions or entire communities of the province.

This prompted many organizations and bodies to launch calls and warnings of the danger of this phenomenon that threatens all Internet users where it became easier means in front of the perpetrators of the crime , so he went criminals who violate the symptoms, and control of the children easily, in addition to committing the crimes of libel and defamation through websites dedicated to this goal.

The internet crime is become very dangerous for Continuity of internet and it's effect in the trade, education, telecommunications in risk. The cyber attacked made the internet very dangerous place for communications. so we need safe internet environment, without any kind of threat which it will effect negatively for international trade and exchange of transfer of the money in the world. Another kind of the internet crime which is crime against children (is very important crime), because children is the future of the world, and any country need good children, well-educated and ready to develop his country which is reflected positive to his country especially and generally to the world . so we need to protect them from this kind of crime. We need to establish Legislation and laws consistent with the Child Rights Act, which was approved by the UN.

The most important issues is to enable young people (Youth) to use the mechanics of the Internet so that they can express their views without fear or terror or control and criminal prosecution , prompting the development and advancement of the country as the young people (youth) are the fuel in the home construction and sustainable development and evolution and sophistication. Must involve all stakeholders to work together to contain the young people and enable them to make decisions on the Internet.

Another issue that must be taken care of a special needs who are suffering many problems and must engage them in dialogues of Global Forum on Internet Governance so that they can give their views and how to explain their position and meet the needs of their own in the governance of the Internet and taken into account in order to be an active force in the international community , this is the simplest we have rights and part of human rights.

Ultimately, the Internet’s global Multistakeholder community should work cooperatively on continuing to improve and evolve the Internet governance system for freedom for youth and more protection for children from the dangers of internet and take in consideration the special needs. The more open and inclusive the approach, the greater the legitimacy the system will have.

The university of Gezira, Sudan believes that existing Multistakeholder institutions deserve significant credit for the Internet’s global growth and dynamism and should remain the cornerstones of the Internet governance system. proper incentives and environment are in place domestically so that a single, interoperable Internet can flourish globally, enabling freedom of expression and economic prosperity.
