- Keywords:

Abstract

The representatives of Denmark would like to express our gratitude for the invitation to the Netmundial Global Multistakeholder Meeting on the Future of Internet Governance as well as for the opportunity to deliver our comments in preparation of the meeting. Denmark supports a single, free, unfragmented internet governed by a genuine multistakeholder model. The internet has served as an unparalleled promoter of economic growth and cross-border sharing of information. However, this will only continue if the internet is perceived as trustworthy and the protection of basic human rights, such as the right to privacy, seems to be a prerequisite to that. We believe that the point of departure for the development of a list of internet governance principles should be already existing texts such as the OECD's Principles for Internet Policy-making.

Document

The representatives of Denmark would like to express our gratitude for the invitation to the Netmundial Global Multistakeholder Meeting on the Future of Internet Governance as well as for the opportunity to deliver our comments in preparation of the meeting.

Denmark supports a single, free, unfragmented internet governed by a genuine multistakeholder model. The internet has served as an unparalleled

promoter of economic growth and cross-border sharing of information. However, this will only continue if the internet is perceived as trustworthy and the protection of basic human rights, such as the right to privacy, seems to be a prerequisite to that.

We believe that the point of departure for the development of a list of internet governance principles should be already existing texts such as the OECD's Principles for Internet Policy-making.
